DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

On page 11, line 8, "polarization plate 900" is changed to --polarization plate 400-

-.
-

2. The preliminary amendment filed on April 5, 2004 is acknowledged.

Allowable Subject Matter

3. Claims 40-44 are allowed (Claims 1-39 are canceled by Applicant).
4. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 40-42 is the inclusion of the limitation of the aperture is defined by two side walls parallel with a plane oblique to the first and second polarizations. It is this limitation found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claim 43 is the inclusion of the limitation of the physical configuration of the wave guide includes a continuous unobstructed aperture defined by two side walls parallel with a plane oblique to the two orthogonal polarizations. It is this limitation found in the claim, as it is claimed in the combination,

that has not been found, taught or suggested by the prior art of record which makes this claim allowable over the prior art.

The primary reason for the allowance of claim 44 is the inclusion of the limitation of the slot continuously extends between the first and second wave guides along a longitudinal axis and is oblique to the two orthogonal polarizations. It is this limitation found in the claim, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes this claim allowable over the prior art.

Nuding et al. (U.S. Patent No. 4,311,973) teaches a junction for connecting together two waveguides whose major transverse axes are inclined to one another, composed of elements connecting the frontal faces of the waveguides in such a manner that their major axes are adjustably inclined to one another, flanges covering the nonoverlapping frontal faces of the two waveguides. However, Nuding et al. does not disclose or suggest the physical configuration of the wave guide includes a continuous unobstructed aperture defined by two side walls parallel with a plane oblique to the two orthogonal polarizations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
